

**AUTOMA**  
IMPIANTI

## OUR COMPANY

AUTOMA IMPIANTI s.r.l. was founded in 2016 thanks to the continuity of the artisan company founded by Mr. MAGLIE GIOVANNI operating in the industrial automation sector for twenty years. Its role is to enable companies in various sectors all over the world to realize their full potential. The company relies on its specialized skills to provide advanced technology services. Always in constant evolution, it is proposed as a partner in the design, construction and maintenance of electrical systems for industrial automations. Active for many years in the electrical, electronic and mechanical sectors, it has specialized in the construction of plants, process control systems, automations, robotics and control boards, achieving a high standard of quality and high skills. We work and develop projects in collaboration with major brands of Italian and foreign industry, demonstrating the quality and reliability of our services.

### CERAMIC

- Storage management
  - Handling lands for dosage
  - Ovens
- Line for enamelling
  - Coloring
  - Pressing dosing

### FOOD

- Bottling
- Conveyors
- Fillers
- Labeling machines
- Casepackers
- Pasteurizers
- Homogenizers
- Palletizers and depalletizers

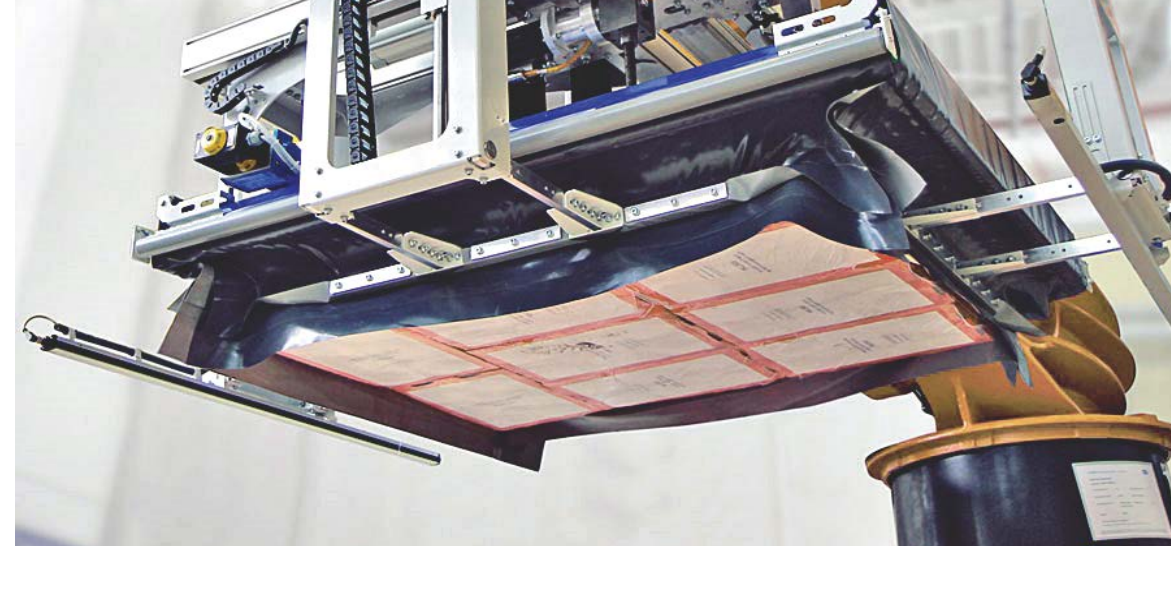

### CHEMICAL

- Electrofilters
- Boilers
- Autoclaves
- Decanters
- Storage tanks
- Plants on pressure tanks

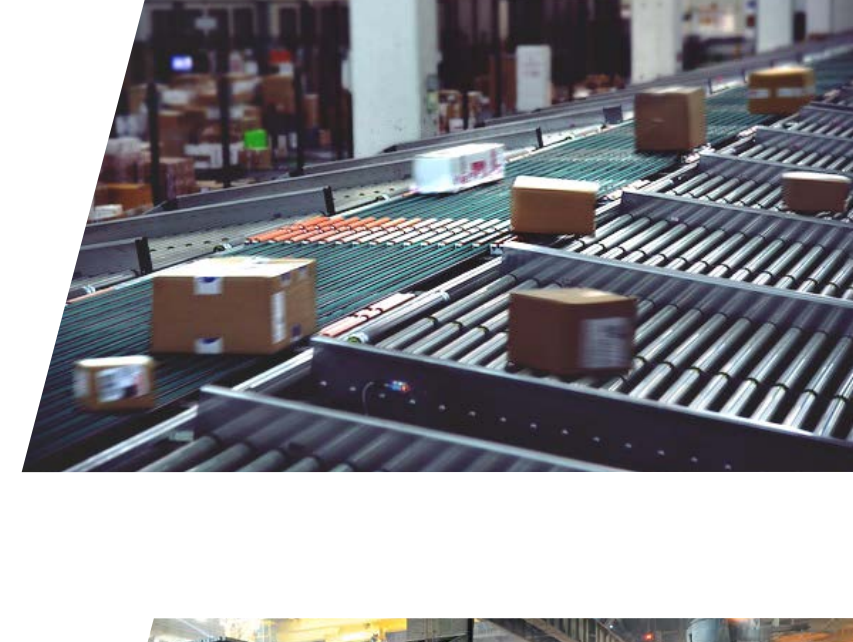

## AUTOMATION

AUTOMA IMPIANTI S.r.l. manufactures automation lines including handling, distribution and packaging customized to customer specifications. AUTOMA IMPIANTI S.r.l. has gained significant experience over the years: from the design and construction of the plants to the creation of software for the management of the automatisms of the various industrial sectors. These experiences have led the company to build automation systems for the ceramics, logistics, food, chemical, automotive and iron and steel industries.

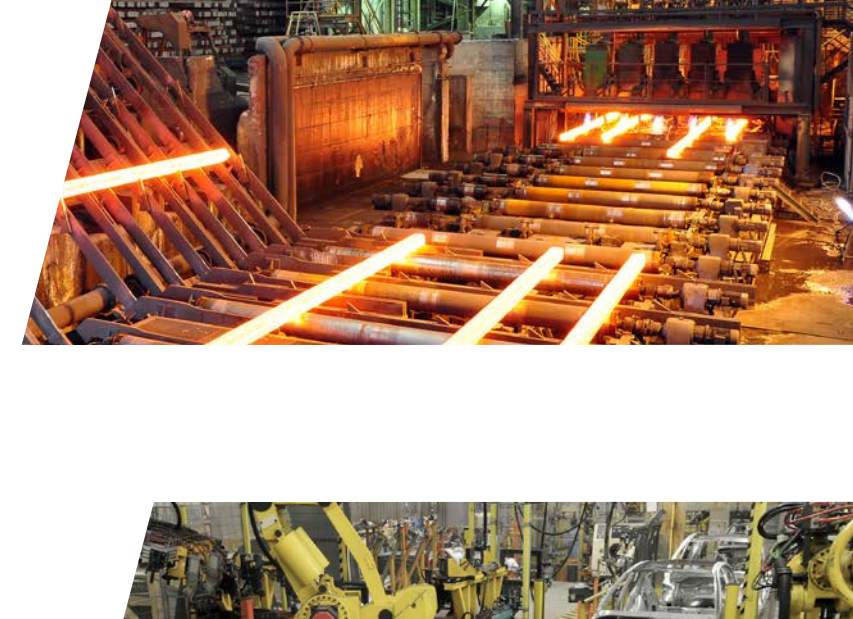

### LOGISTICS

- Automatic warehouses
- Transhipment shuttles
- Stacker cranes
- Package sorting

### STEEL

- Hydraulic Presses
- Laminates, tubular and others
- Low injection systems pressure

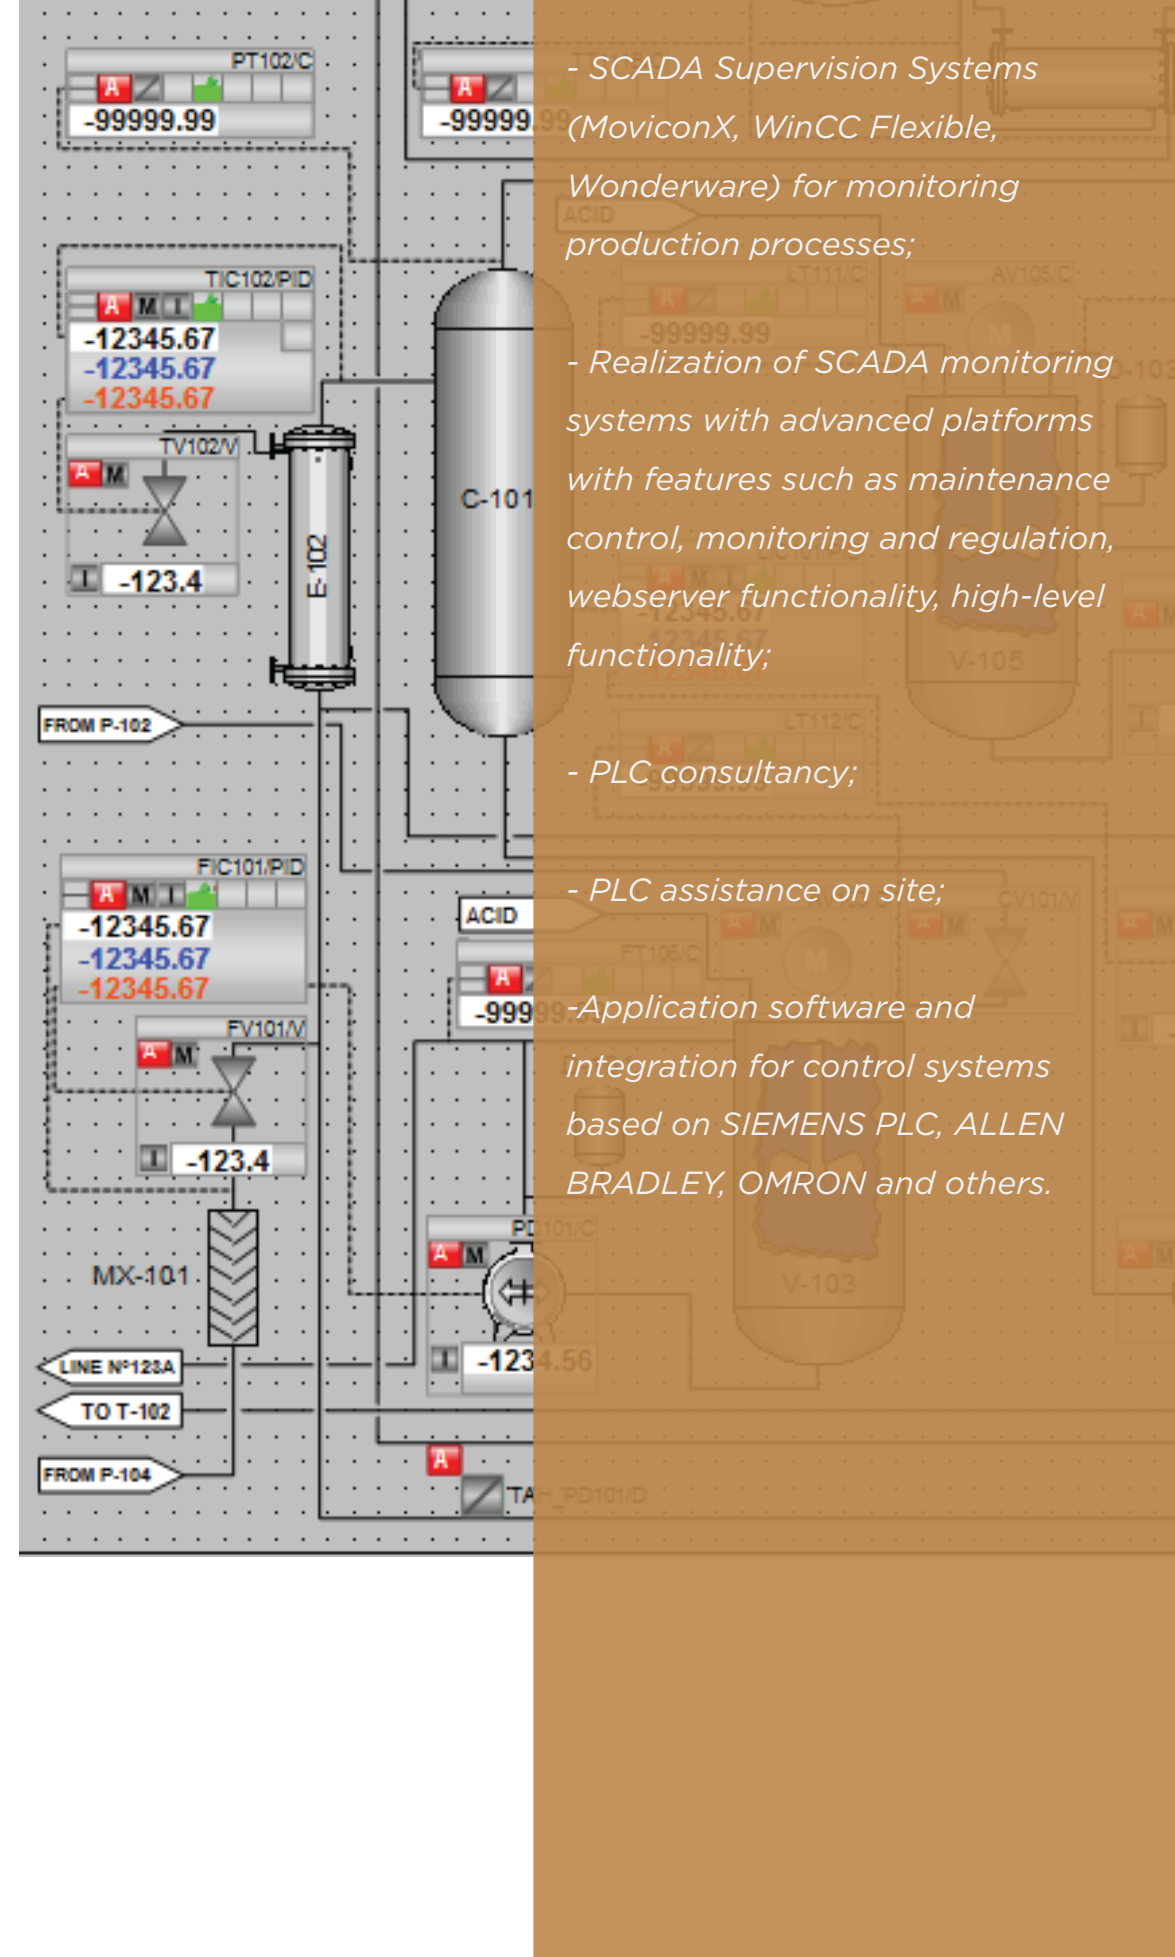

### AUTOMOTIVE

- Molding line plants
- Precision welding e handling
- Painting line
- Final assembly line
- Robot
- Robotized islands

## SOFTWARE AND SCADA

PLC programming is of crucial importance in the development of an automation system. The continuous evolution of these products and the need to integrate them into increasingly complex systems, makes the professionalism of companies with a solid experience necessary. In our business we have used a wide range of PLC: from small compact to medium and large power modules. AUTOMA IMPIANTI s.r.l. is able to devise and develop supervision software based on customer specifications using all types of equipment available on the market. Our technicians know how to support every mechanical company, supplying it with the design and construction of the electrical part and the supervision and control software for its machines or plants. It is able to develop software for the following applications:

- Configuration of Operator Panels;
- SCADA Supervision Systems (MoviconX, WinCC Flexible, Wonderware) for monitoring production processes;
- Realization of SCADA monitoring systems with advanced platforms with features such as maintenance control, monitoring and regulation, webserver functionality, high-level functionality;
- PLC consultancy;
- PLC assistance on site;
- Application software and integration for control systems based on SIEMENS PLC, ALLEN BRADLEY, OMRON and others.

## CONTROL PANELS

The automation panels include installations for suction and filtration plants, sandblasting and painting booths, packaging machines, presses, machines for the food sector, sawing machines, conveyor belts, grinders, ovens and automatic machines in general. AUTOMA IMPIANTI s.r.l. is a company able to offer complete services, starting from simple manpower for cabling of panels, to turnkey project, to assembly of panels with components supplied by the customer, to consultancy for the design of complex systems. Our philosophy is based on taking full responsibility of the customer's needs, responding with professionalism and punctuality to every request. Many customers relying on us have found the creativity necessary to solve problems in an efficient way and not previously considered; others have found the flexibility and adaptability to follow them in their evolutions.

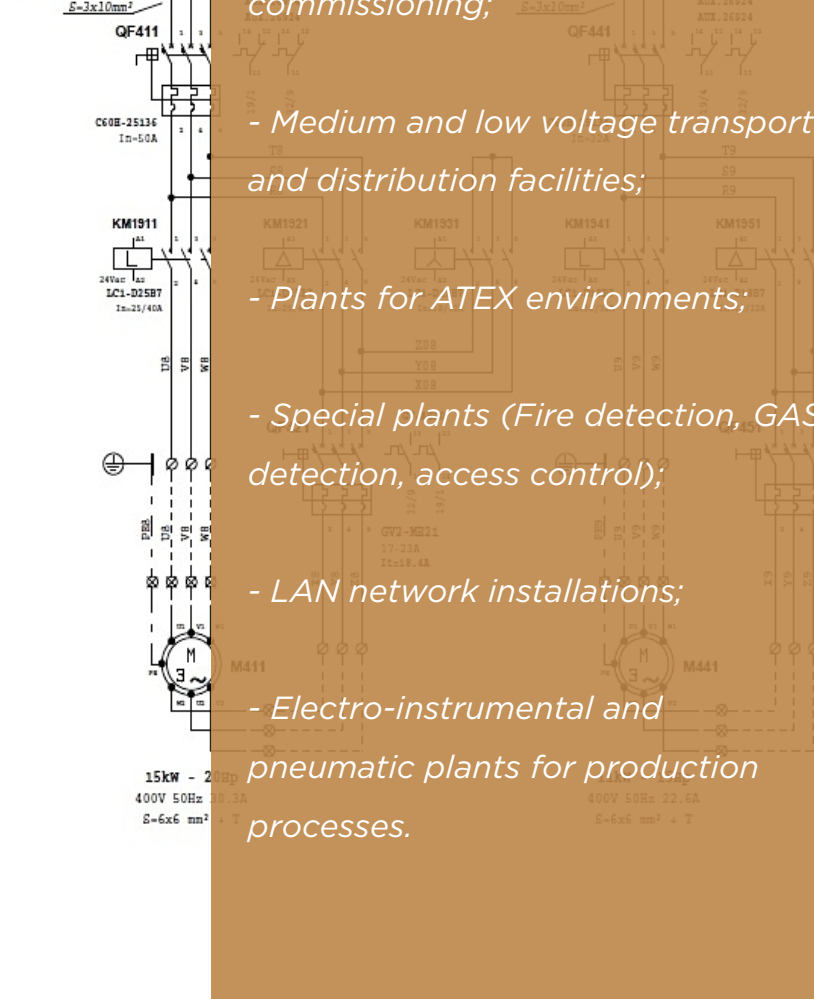

- Control and command panels with PLC platform;
- MCC electric panels with fixed and removable drawers;
- Power tables;
- Console for bridge carriages for containers;
- Electric distribution boards.

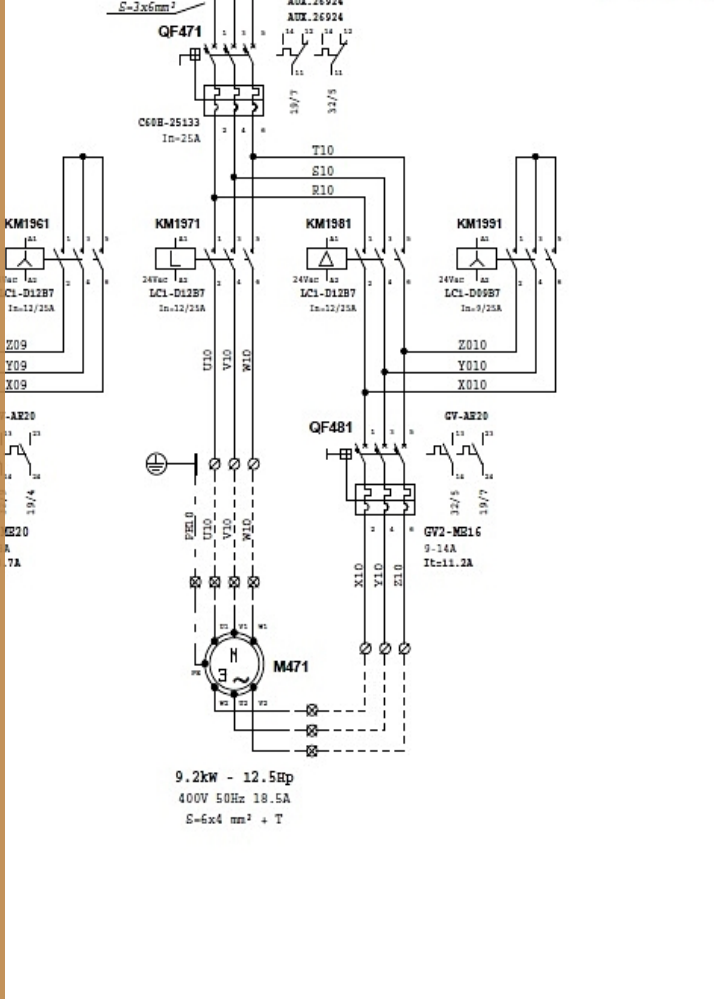

## ELECTRICAL SYSTEMS

In order for an electrical system to be considered compliant, it must not only be designed and installed by specialized technicians, but above all must comply with the requirements of recent regulations. Over the years, AUTOMA IMPIANTI s.r.l. has specialized in the construction of electrical systems in various industrial sectors, in particular by taking care of supplying suitable electrical systems, ensuring the operation and safety of the equipment connected to it, respecting the needs of the customer.

In particular we deal with supply and installation of:

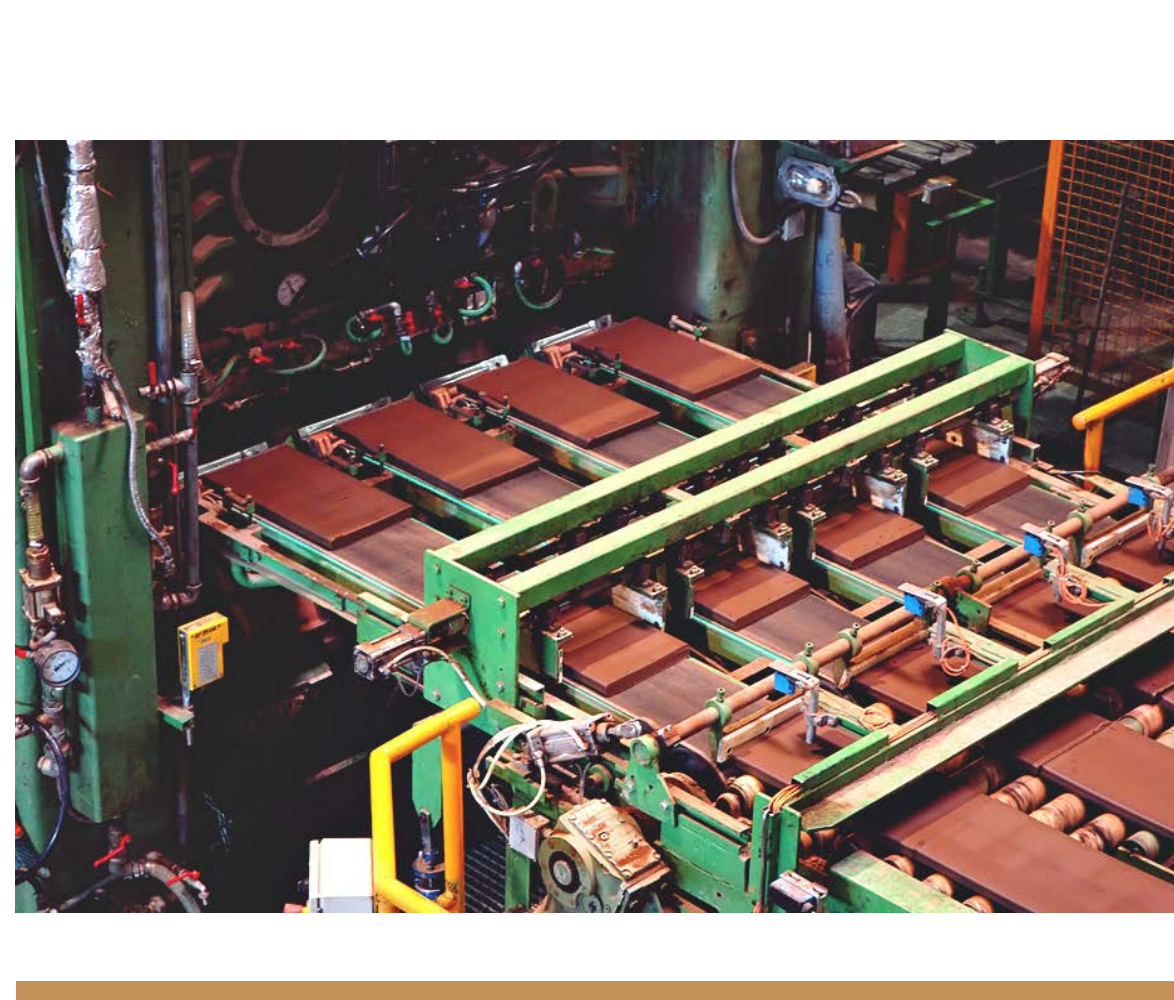

- Plants from planning to commissioning;
- Medium and low voltage transport and distribution facilities;
- Plants for ATEX environments;
- Special plants (Fire detection, GAS detection, access control);
- LAN network installations;
- Electro-instrumental and pneumatic plants for production processes.

## MACHINE EDGE

AUTOMA IMPIANTI s.r.l. also guarantees its customers a 360 degree service, sending a team of technicians to home who will take care of the wiring operations on board the machine for electrical panels and commissioning. In addition, compared to the traditional processing at the customer's site, we also offer the possibility to carry out wiring at our premises with the possibility of testing on site. In this way it is possible to evaluate with the customer the most advantageous solution for both: we will evaluate together the final cost / benefit ratios, taking into account the transport costs of the machines to be wired but also the technicians' movements, as well as the logistical advantages of having to a greater work area available. As per our philosophy, we will choose the solution that guarantees the greatest benefits and the greatest mutual satisfaction.

We also provide preventive, scheduled and prompt intervention services on production lines. Over the years we have acquired great experience in the installation and maintenance of industrial plants. The experience accumulated over many years at the service of the industry allows us today to offer a wide range of products and services able to meet the most varied needs of the sector without losing competitiveness, quality and speed. We are an operational support for companies and we provide our experience in:

- Machinery review;
- Assembly of industrial plants.

## MAINTENANCE

AUTOMA IMPIANTI s.r.l. in addition to the construction or refurbishment of plants, is able to serve in a timely and impeccable manner assistance on systems of all kinds; on the Italian and foreign network. In addition, the company also offers its customers scheduled and periodic maintenance services on systems and interventions for repairing faults that have occurred during operation. Scheduled and periodic maintenance interventions, which are usually carried out as part of a specific contract with the customer, are planned according to company needs. The contractual frameworks in which the activities are carried out are differentiated and studied ad hoc for the client.
